@NashnoX7e2

- Use Flexible when using Rows/Columns
- FittedBox, Align, etc can be used to resize and position widgets
- MediaQuery size can be used to determine and set global breakpoints
- LayoutBuilder can be used to display widgets based on available space allocated by parent

and position wide gets

widged on available space

and set global breakpoints

• LayoutBuilder can be used to display

all located by parent

• Use Flexible when using Rows/Columns

MediaQuerysize and useMediaQuery to determine

• FittedBox, Align, etc can be used to resize
